

VEDSRI's VISWA VAEDHA VIJNYANA VIDHYAALAYA

ITS NECESSITY

After 25 years of relentless research, P.V.N.Murthy, former systems manager of Airindia's computer centre in Mumbai, rediscovered a path-breaking theory named by him as LINGUAMATHS-mathematics of languages. Its application to many ancient scriptures exposed the following:

Before 'pralaya' (the great deluge) 4 Vedas, 108 Upanishads and voluminous allied Vedic literature were used as textbooks on all conceivable subjects including science and technology at all levels of educational institutions. Landmass was one at that period (named as Gondwana by scientists now) and thus Vedic education system prevailed all over the whole world and with this knowledge very advanced civilisation flourished.

The 'pralaya' created land drift and landmass was split into several pieces. Almost entire population perished along with the educational

Institutions and textbooks. South sank and North rose and in the process most of the survived textbooks got washed ashore to the Southern parts of India and also a few to the other drifted lands. After the death of the educated survivors, nobody could make out the meanings or even the language of the survived textbooks. So, most of the existing books on Vedas can only be the guess works and interpretations by authors of India and other drifted lands who did not know the actual Vedic language.

Few intelligent people in drifted lands developed their own languages based on the Vedic language they learnt from a few survived elders. So the basis for all the languages remained same and many words are common to all languages even now.

Murthy extracted the syntax rules common to ancient scriptures like Agasthyam, Tholkaappiam, Panini, etc. that specialize in the theory of designing a language and perfected Linguamaths.

Application of Linguamaths showed that most of the so-called modern science landmark theorems are already present in the same words in Vedas and also Thamizh Sangam literature. These include Pythagoras, John Dalton, Isaac Newton, Einstein, Neil Bohr, Chebyshev, Lagrange, etc. While within the decoded versions of a canto of Atharva Veda, Brahma Suuthra, Sankhya Kaarika, Isha, Keno and Katho Upanishads, these many theorems exist already, if all Vedic literature get decoded, to

what dizzy heights our technology will rise is anybody's guess. This is not one man's job. That is why a Vedic Science University is necessitated so that a large team of highly qualified scholars can be trained by Murthy in Linguamaths and Veda Bhasha thru it and assign one portion of Vedic literature to be decoded so that the whole Vedic literature get converted into textbooks in science and technology in two or three years.

FIRST PHASE of the University

Start one year diploma course in Linguamaths and Veda Bhasha for scholars with minimum qualifications of graduation in any science, maths, computers, engg, or medicine.. Syllabus:

One month orientation—Vedic period, its origin of language, its basis, and reason for its mystery,

Nine months Linguamaths—creation of an alphabet with its 250 definitions, 1080 syntax rules with practical application to two different scripts, one month each.

SECOND PHASE

Only the above diploma holders will be eligible for the next three year Doctorate course. In 4 months, rules for combining alphabets to form words will form the syllabus.

How to combine words to form sentences along with their connections to algebra will be the syllabus for 4 months next. Combining sentences to form paragraphs, and combining paras to form topics and further combining topics to form a full subject book will be syllabus for further 6 months.

There will be an aptitude test to decide suitable allocation of portion of Vaedhic or Thamizh Sangam liter-

The Linguamaths taught in the Diploma course enables the student to mathematically decode each of the Vedic works into an unadulterated pure textbook on its own subject of sciences, mathematics, engineering, technology, medicine,, etc. In the rest of study period, each student should complete the allocated portion under the guidance of Murthy and professors of modern science in the respective subject.

The completed textbooks will be assessed by a panel of international experts for getting an award of degree equivalent to Ph.D.

Thus, if 100 students are enrolled for a total of 4-years (including holidays in between) Ph.D. course, almost the whole gamut of Vedic and Thamizh Sangam literature get decoded. Thereafter, it is possible to phase out the present syllabi enforced by the former British rulers and our own to be introduced. This will pave the way for exploiting thus-far unused theorems of Vedic, and Thamizh Sangam science, for the further growth of science and technology.

SVVK Trust is donating 33 acres and its educational set-up for the purpose. Pictures show the consortium.

ASWIN TRUST is registered public charitable trust founded by Murthy specially to raise funds for VEDSRI activities.
